Computer Software	Modular Cable & RJ22 Connector Ready Yes <input type="checkbox"/> No <input type="checkbox"/>	

After an installation agreement is signed and is in effect, SUNLESS, INC. will provide installation and comprehensive training for owner and salon personnel. However, the owner is responsible for being prepared for the VersaSpa® Sunless Skin Care System prior to its installation. The following are requirements and recommendations that must be completed prior to arrival of the VersaSpa® Sunless Skin Care System certified installer technician on site.

#### DEDICATED ROOM

The VersaSpa® Sunless Skin Care System should have a room dedicated for its use only. The minimum size needed is 8' l x 8' w x 8' h of cleared area. The floor must be level and free of obstructions. Carpeted floor coverings are not recommended. Room lighting is also required. All HVAC supply and return ducts need to be closed.

#### ELECTRICAL SERVICE

The VersaSpa® Sunless Skin Care System requires the following electrical service:

1. A dedicated grounded GFI (120 VAC, 20 AMP) outlet, located within four feet of the back of the VersaSpa booth.
2. The VersaSpa is supplied with a T-Max interface used to initiate a VersaSpa session linked through a Salon Management Software. If the VersaSpa is to be connected to the salon T-Max system, please ensure that all proper communication cables are present with enough length to reach the back of the machine plus an additional 5 feet.
3. The VersaSpa can also be controlled through its integrated LCD control panel.
4. All electrical work must be completed according to local building codes.
5. SUNLESS, INC. certified installer technician is not responsible for electrical service installation.

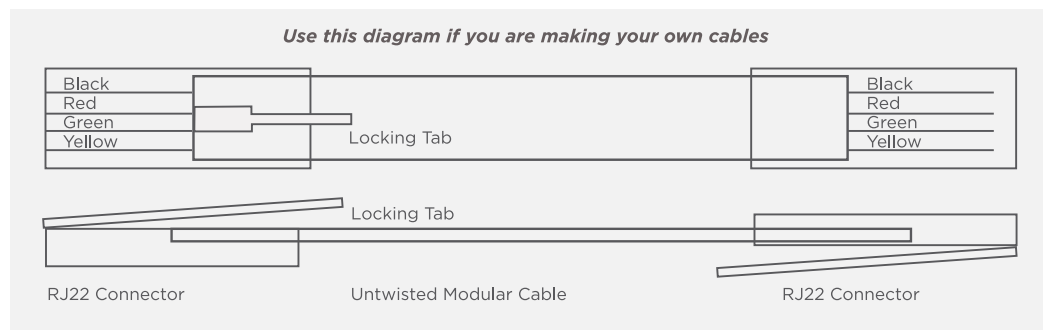

## T-MAX® 3W G2 AND REMOTE MANAGER CONNECTIONS

The VersaSpa Sunless Skin Care System's on-board T-Max Timer requires modular cable/cables with RJ-22 connectors - to plug into the onboard T-Max communication ports. The on-board VersaSpa T-Max Timer is located in the spray column of the VersaSpa Sunless Skin Care System. Access is provided for the modular cable at the base of the spray column below the main power switch. A minimum of 15' of cable is required from the wall to reach the on-beach T-Max Timer.

Each VersaSpa comes with a remote T-Max® 3W G2 that can be used standalone or in conjunction with the onboard-VersaSpa T-Max Timer. To utilize the clean bed feature the T-Max® 3W G2 provides you must use the provided T-Max® 3W G2 in conjunction with the onboard VersaSpa T-Max Timer.

**NOTE:** If you are using the G2 wireless adapters, you do not need to run the modular cable. Connect the G2 access point to the T-Max® 3W G2 using the RJ-11 port on the on-board VersaSpa T-Max Timer. Connector shown in the diagram in this document is used for modular wiring in daisy chain T-Max systems.

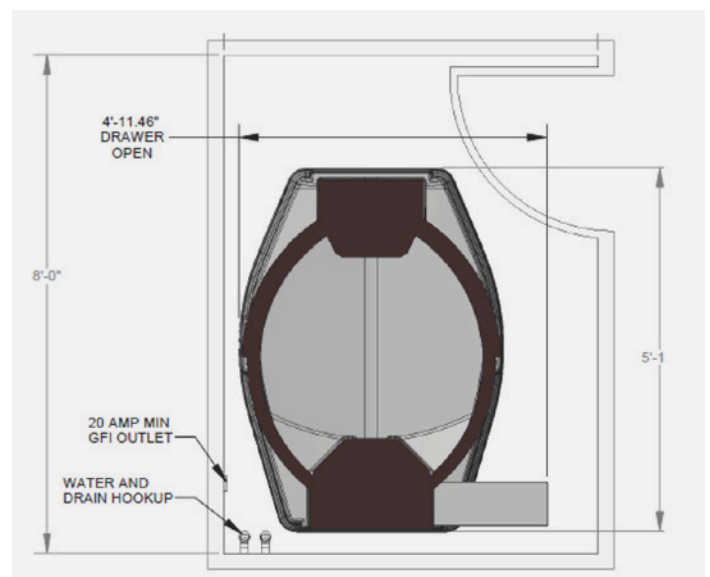

**IMPORTANT:** Cutting the modular cables provided with the TMax® 3W G2s voids the warranty on your T-Max® Series. If you need longer cables, please contact your dealer. If the cable provided is too long, simply roll it up in the wall. **Wireless G2 Adapters Using T-Max G2 wireless modules, you can connect the on-board VersaSpa T-Max Timer without the need to run modular cables. Contact your local T-Max distributor for more information.**

## COLD WATER AND DRAIN

A cold -water service and drain are required for sanitizing and wash down after each session. The following is required:

1. Cold-water service is required with a minimum of 40 psi and a maximum of 100 psi, and capable of 8 GPM. The cold water supply needs to be within four feet of the back of the VersaSpa Sunless Skin Care System. A standard male garden hose fitting is required with a shut-off valve.
2. The drain service needs to be within four feet of the back of the VersaSpa Sunless Skin Care System. The drain should be terminated with a standard male garden hose fitting and a shut off valve for ease of disconnection. The VersaSpa Sunless Skin Care System is equipped with a fully automatic fluid discharge system. This system is capable of overcoming 12 feet (335cm) of head pressure. A minimum drainpipe diameter of 3/4" is required. Drainage should be directed to the sewer system.
3. All plumbing work must be completed according to local building codes.
4. SUNLESS, INC. installer technician is not responsible for cold water supply or drain piping.

## **BUILDING ACCESS**

The VersaSpa Sunless Skin Care System installation and employee training are typically completed in a single day. It is important that the VersaSpa Sunless Skin Care System arrives the morning of or the day prior to installation day, and that the installer technician has full and complete access to the building.

## **VERSASPA® SUNLESS SKIN CARE SYSTEM SHIPMENT, UNLOADING AND STORAGE**

The VersaSpa Sunless Skin Care System is shipped in two large containers. A minimum of two people are required to unload and store the VersaSpa Sunless Skin Care System prior to the installer technician's arrival. Please have the appropriate personnel available for unloading. Do not depend on the delivery truck driver to assist with the unloading of the containers. SUNLESS, INC. requests that the containers remain unopened, near or in the dedicated room. In the event that the boxes are opened prior to the installer technician's arrival, SUNLESS, INC. will not be responsible for damaged or missing parts. Please make note of any apparent damage on the bill of lading prior to signing for and accepting the shipment. Actual delivery date and time may vary. Specific time and date of delivery is not under the control of SUNLESS, INC. We will provide appropriate shipping information allowing you to track the shipment and estimated time and date of arrival (i.e. carrier name, tracking number, and telephone contact number). Sunless Inc. service tech is not responsible for disposal of VersaSpa System shipping pallets, or packaging materials.

## **OPERATIONAL TRAINING**

It is recommended that owner personnel be trained on customer instructions as well as mechanical operations of the VersaSpa Sunless Skin Care System.

Dedicate time for uninterrupted training. One training session will be given for each installation agreement. Coordinate a training session time with the installer technician, so that personnel arrangements can be made accordingly.

## **SYSTEM MANAGER**

It is recommended that the salon have at least one person (full time, manager or owner) assigned to maintain the VersaSpa Sunless Skin Care System. This person will receive an additional hour of specific training covering system adjustments, trouble shooting/correction, customizing multisessions to best serve the salons' customer base and solutions as well as overall maintenance of the VersaSpa Sunless Skin Care System.

It is very important that you read and fully understand your responsibilities concerning the installation and training for the VersaSpa Sunless Skin Care System.

I \_\_\_\_\_ fully understand my responsibilities as detailed within this document.
